Human Computer Interaction

Fall 25

PD Phase 1 (Group Work)

PROJECT TITLE

Due Date: 05-12-2025 (via portal)
Total Marks: 100 (70 Document +30 Viva)

CLO#	Course Learning Outcome (CLO)	Taxonomy Level	Mapping to PLO
CLO 2	Understand elements of good and bad design, user centric interactions and principles of innovation in realm of interactive design.	C3	3

Name	Registration Number	Section

Guidelines

1. Add this Title Page with your submitted report. Violation will result in deduction of 5 marks.
2. Group members of project can work together. Only group leader will submit the report on portal.
3. Be careful about font structure and alignment of text. Violation will result in deduction of 5 marks.
4. There is a strict policy against plagiarism and cheating. The penalty can be an F grade. Properly cite and refer the content wherever required. Violation will result in deduction of 5 marks.
5. Your report will be judged on the following rubrics.
    - *Completeness*: Don't omit a dimension of usability, and don't overlook an obvious usability issue that even the reader notices.
    - *Depth:* "Efficiency is good, because it feels fast to use" is not deep analysis. "I've never made any errors with it" is not deep analysis.
    - *Clarity:* The reader should not struggle to understand what you're talking about.
    - *Usability of presentation:* Your report is itself a user interface whose purpose is to convey ideas to a reader. If your report is not readable then it will be harder for the reader to use, and it will not demonstrate an ability to apply the ideas of this class.

The amount of good luck coming your way depends on your willingness to act. Good Luck

Project Title

Abstract

An abstract is an outline/brief summary of your whole project. It should have an intro, body and conclusion. It is a well-developed paragraph, should be exact in wording, and must be understandable to a wide audience. Abstracts should be no more than 250 words.

1. Introduction

Brief introduction of the system or project that you are working on.

1.1 Idea Generation

- You have to provide justification on how you choose an idea for your application. For that you have to provide the following
    - Write down the details of all the ideas/ problems you had on individual basis. (At least one idea/member). Also provide rough storyboard sketches for each idea/problem.
    - Briefly explain your brainstorming activity, illustrating how you conducted each step.
    - Selected Idea: Mention the idea/problem that has been selected during the brainstorming session/ activity conducted in class. Provide reasons/attributes for acceptance of this idea and rejection of others.

1.2 Problem Statement and Storyboard

A problem statement is a concise description of an issue to be addressed or a condition to be improved upon (Write problem statement for your final idea selected during brainstorming activity. It identifies the gap between the current (problem) state and desired (goal) state of a process or product. Focusing on the facts, the problem statement should be designed to address the Five W's (Who, What, When, Why, Where). **Draw a storyboard for the final selected idea.**

1.3 Objectives

List all the objectives to be achieved after the completion of this project.

1.4 Motivation

What is motivation or inspiration behind your application? Which factors motivated you to develop an application like this?

2. Target market Identification

A description of important characteristics of the users of the system.

2.1 Target Market

Identification of a particular group of consumers at which a product or service is aimed.

2.2 User Classes and Characteristics

Identify the various user classes extracted from your target market that you anticipate will use this product. User classes may be differentiated based on frequency of use, subset of product functions used, technical expertise, security or privilege levels, educational level, or experience.

2.3 Primary and Secondary User Classes

Differentiate your user classes as primary and secondary users. Write down the tasks of primary and secondary users. ***A justification on how and why you have made separate class is also required.***

3. Exploratory Study

3.1 Analysis

An analysis of the similar existing system (automated or manual) including the strengths and weaknesses of the system. Also discuss the novelty and meaningfulness of your desired system.

3.2 Usability Goals

An initial list of usability criteria, or principles that should be used in the eventual evaluation of your system, including a high-level description of how could you conduct the experiment on your system for evaluation of those goals and how could you measure the successful adherence to these goals.

4. Need Finding (Interviews)

4.1 Interviews

Conduct interviews by selecting 2 users/user class. Submit audio or video recordings of interviews that you conducted.
Recording should be submitted on the OneDrive folder (Link Shared by Group Leaders via Email)

Write down the whole interview process that you have used for this activity e.g.:

- Introduction part: All the statements you would be telling or asking interviewee.
    1. Introduce yourself
    2. Reassure about the ethical issues - privacy, rights to information

3. Ask to record.

- Main Part: At least 10 questions. Questions should be open-ended.

4. Make first questions easy & non-threatening.
5. Phrase the questions in an open or neutral way. Also, encourage the user to reply with full sentences, rather than a simple "yes" or "no". For example, ask, "What do you think of this feature?" and not "Did you like this new feature?"
6. Do not ask leading questions. For example, "how did that poorly designed dialog affect you?"
7. Include a few easy questions to defuse tension at the end

- Closing: All the statements you would be telling or asking interviewee.

4.2 User Photos and Captions

Take a picture of your potential user and mention his/her goals in the caption. (See Sample document uploaded on portal)

4.3 User Needs

Identify the user needs by extracting them from the interviews. Summarize at least 5 user needs for each interview. (See Sample document uploaded on portal)

4.4 Class profiles

Make class profiles of your user classes (both primary and secondary).

4.5 Personas

Make personas for your user classes (It can be one or more personae for each user class depending on your application and satisfactory level).

4.6 Scenarios

Write scenarios for the personae you have created covering all the main goals of your desired system.
